FEATURE SPECIFICATION

Interactive gaming integration on TV screens

Increase non-video engagement by 20% by allowing subscribers to play lightweight cloud games on their TVs utilizing their mobile phones as controllers.

USER STORY

AS A Netflix subscriber

I WANT to play games on my TV using my phone

SO THAT I can enjoy interactive entertainment without buying a console.

ACCEPTANCE CRITERIA

- ☒ Games load inside the Netflix TV app without additional downloads
- ☒ Phone pairs instantly with TV via QR code scan
- ☒ Latency between phone input and TV action remains <50ms
- ☒ Supports multiplayer modes for household profiles

SUCCESS METRICS

15% of active TV households play a game weekly

10% increase in average monthly session hours for gaming cohort

Churn rate reduces by 8% among active gaming households

OPEN QUESTIONS

- Q1** What is the maximum game graphics complexity supported by smart TVs?
- Q2** Should gaming achievements unlock profile avatars?

FEATURES

Everything a PM needs, in one teardown

Ten deep analysis modules — each one built around a real PM framework used at top tech companies.

CORE ANALYSIS MODULES

AI-powered

Product Overview Generator

Understand any product in under 30 seconds.

Our AI reads the product's website, positioning, and public data to extract the essential PM intelligence — problem, users, value proposition, and core features.

- ✓ Problem statement with root-cause framing
- ✓ Target user segments by job role and context
- ✓ Value proposition mapped to key

Persona engine

User Persona Mapping

Goes beyond simple demographics.

TeardownAI generates two full user personas with goals, frustrations, usage triggers, and willingness-to-pay signals — ready to drop into any PRD or pitch deck.

- ✓ Primary persona with name, role, and daily context
- ✓ Secondary/edge-case persona for niche segments
- ✓ Goal and pain point breakdown per

Market intel

Competitive Landscape Analysis

Maps the full competitive moat around any product — direct rivals, indirect alternatives, and emerging threats — with positioning notes that go beyond simple feature checklists.

- ✓ 4–6 direct competitors auto-identified
- ✓ Indirect and substitute competitors flagged
- ✓ Differentiation score per competitor

- differentiators
- ✓ Core feature list with priority ranking
- ✓ Industry and category auto-detection

Claude-powered

Any URL or name

<30s turnaround

- persona
- ✓ Behaviour triggers and adoption barriers
- ✓ ICP scoring and fit-to-product alignment

ICP detection

Interview-ready

PRD-compatible

- ✓ Market positioning map (price vs. value)
- ✓ Where each competitor wins and loses

Battle-card ready

Market positioning

Win/loss signals

Strategic framework

Full SWOT Analysis

A rigorous four-quadrant SWOT built from real product data — not generic buzzwords. Each quadrant gets specific, actionable bullets that a PM can bring directly into a strategy review.

- ✓ Strengths tied to product defensibility
- ✓ Weaknesses mapped to user churn risk
- ✓ Opportunities ranked by market timing
- ✓ Threats cross-referenced with competitor moves
- ✓ One prioritised action per quadrant

Monetisation

Revenue Model Decoder

Reverse-engineers exactly how a product makes money — from the pricing tiers on the surface to the upsell triggers, expansion revenue levers, and hidden monetisation mechanics underneath.

- ✓ Pricing model: freemium, subscription, usage, hybrid
- ✓ Free-to-paid conversion triggers identified
- ✓ Upsell and expansion revenue opportunities
- ✓ Net Revenue Retention levers flagged
- ✓ Unit economics assumptions and benchmarks

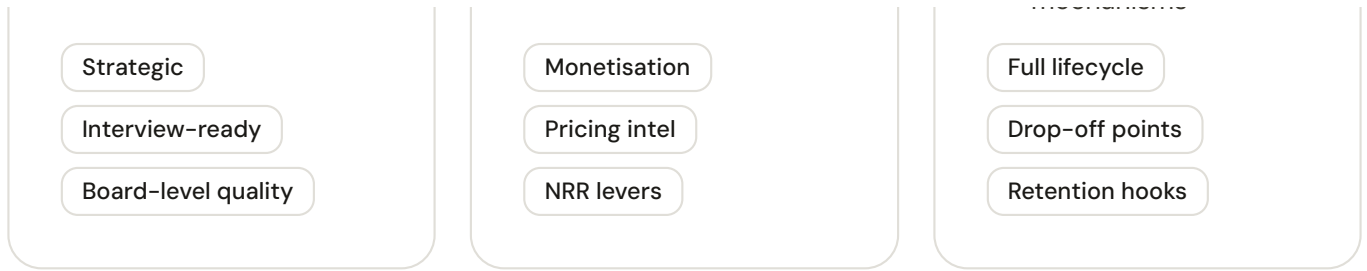

User journey

User Journey Mapping

Traces the full product lifecycle from first touch to loyal advocate. TeardownAI identifies the critical moments of friction, delight, and drop-off across five key stages.

- ✓ Discovery: how users first encounter the product
- ✓ Onboarding: activation steps and time-to-value
- ✓ Core loop: habit-forming actions and retention hooks
- ✓ Expansion: upsell and feature discovery moments
- ✓ Referral: virality triggers and sharing mechanisms

EXTENDED PM MODULES

KPI framework

Growth

Prioritisation

Product Metrics Recommendation

Suggests the exact KPIs a PM should track for any product — mapped to the product's stage, business model, and growth motion. No more copy-pasting generic metric lists.

- ✓ North Star Metric with rationale
- ✓ L1 metrics: DAU, MAU, Retention, Conversion
- ✓ L2 metrics: feature adoption and engagement
- ✓ Vanity vs. actionable metric distinction
- ✓ Dashboard structure recommendation

North Star

AARRR-aligned

Stage-appropriate

Growth Opportunity Scanner

Identifies the highest-leverage growth levers for any product across acquisition, retention, and monetisation — with channel-specific tactics tailored to the product's category and audience.

- ✓ Top 3 acquisition channels with effort vs. impact
- ✓ Retention loop improvements and nudge strategies
- ✓ Monetisation experiments ranked by revenue potential
- ✓ Viral and referral mechanic suggestions
- ✓ Quick wins vs. strategic bets breakdown

Acquisition

Retention

Monetisation

RICE Feature Prioritisation

Takes the AI-generated list of recommended features and scores each one using the RICE framework — so you always know which bets to take first and which to park for later.

- ✓ Reach: estimated user impact per feature
- ✓ Impact: business value score (1–3)
- ✓ Confidence: data certainty weighting
- ✓ Effort: engineering complexity estimate
- ✓ Final RICE score with ranked feature table

RICE framework

PM-standard

Prioritised output

PRD generation

Mini PRD Generator

Converts the teardown

insights into a structured, one-page PRD for the top recommended feature — complete with objective, user story, acceptance criteria, and success metrics.

- ✓ Feature objective tied to business goal
- ✓ User story in standard "As a... I want... So that..." format
- ✓ Acceptance criteria with edge cases
- ✓ Success metrics mapped to product KPIs
- ✓ Open questions and dependencies flagged
